

SUMMARY

Senior Data Engineer and Data Lead with 11+ years of experience spanning data analytics, engineering, and platform development. Built modern data platforms, ETL pipelines, and automation solutions that transformed manual reporting processes into scalable data systems. Proven expertise in SQL, Python, ETL/ELT, data warehousing, and cloud technologies, with a track record of taking ownership of complex technical challenges, rapidly learning new technologies, and delivering scalable, reliable data solutions.

SKILLS

Languages & Frameworks: SQL, Python, dbt, PySpark, Pandas, Scikit-learn, Requests, Deluge

Data Engineering & Architecture: ETL/ELT Pipelines, API Integration, Data Modeling, Data Warehousing, Data Quality Validation, Data Lakehouse Architecture, Documentation

Cloud & Data Platforms: Snowflake, Databricks, AWS (S3, Lambda), GCP (BigQuery, Cloud Run, Pub/Sub, Firestore)

Analytics & Visualization: Power BI, Looker, Semantic Modeling, KPI Development, Self-Service Analytics

EXPERIENCE

Data Analytics and Engineering Lead | San Joaquin County Probation | Stockton, CA | March 2023 - Present

- Architected and maintained the department's data stack using a Python-based workflow orchestration framework executing 30+ scheduled ETL pipelines to ingest, validate, transform, and load data from multiple operational systems into a centralized SQL Server warehouse supporting 70+ tables across four schemas.
- Lead the modernization of legacy ETL and on-premise reporting workflows into a cloud-based ELT architecture using Snowflake and dbt, implementing source-curved-mart data layers to improve scalability, maintainability, and self-service analytics.
- Lead the department's data team responsible for analytics, reporting, data engineering, and warehouse development supporting county-wide operations and executive decision making, including recruiting and mentoring analysts in SQL, Python, data modeling, reporting, and automation practices.
- Collaborated with business stakeholders and technical teams to define data requirements, design scalable solutions, and improve data accessibility.
- Produced annual analytical evaluation reports incorporating statistical analysis, trend identification, outcome measurement, and performance monitoring for executive leadership.
- Managed sensitive criminal justice data within a regulated environment requiring strong governance, privacy controls, and data integrity standards.

Data Strategy & Systems Consultant | Jesus Said Go | Remote | August 2025 - Present

- Built automated ingestion workflows utilizing REST APIs and webhooks to process external JSON payloads and validate incoming transcription data.
- Developed automated reporting pipelines that aggregate performance metrics and deliver scheduled insights through WhatsApp API integrations.
- Redesigned analytics architecture within Zoho Analytics, improving data accuracy, transformation processes, reporting automation, and stakeholder access to operational metrics.

Senior Data Analyst | San Joaquin County Probation | Stockton, CA | December 2014 – March 2023

- Developed enterprise reporting and self-service analytics solutions using advanced SQL, Power BI, Python, statistical analysis, and KPI design, while improving data accuracy and rectifying inconsistencies in external and operational reporting across multiple business units.
- Automated 20+ recurring reporting and data extraction processes using Python, SQL, and VBA, reducing manual effort, increasing reporting consistency, and improving reliability of analytical outputs.

- Developed a machine learning solution using NLP techniques and probation case notes to predict client outcomes, achieving 89% predictive accuracy and delivering actionable insights for management decision-making.
-

PROJECTS

Etsy Shop ELT Pipeline [[Github](#)]

- Designed and deployed a fully automated cloud-native ELT pipeline that extracts incremental sales and fulfillment data from Etsy and Gelato APIs via AWS Lambda, stores raw JSON in partitioned Amazon S3, ingests into Snowflake using Snowpipe, and transforms it with dbt into a dimensional star schema with automated data quality tests and scheduled warehouse builds via Snowflake Tasks.

NonProfit Website Clickstream Pipeline & Analytics [[Github](#)]

- Designed and implemented, for a live production website, a real-time clickstream analytics pipeline using JavaScript, Google Cloud Run, Pub/Sub, Firestore, BigQuery, and Looker to capture anonymized website engagement events and deliver session-level analytics.

Earthquake ETL Lakehouse Pipeline | [[Github](#)]

- An end-to-end PySpark + Delta Lake pipeline in Databricks ingesting real-time USGS earthquake API data into Bronze/Silver/Gold medallion layers with incremental metadata tracking, optimized analytic tables, and visualization outputs for reporting.

Powerlifting Data Analysis & Visualization | [[Github](#)]

- Extracted, cleaned, and feature-engineered OpenPowerlifting competition data in Python, storing results as Parquet files. Explored data for insights and produced an interactive Power BI dashboard to analyze trends and participant performance.
-

EDUCATION & CERTIFICATIONS

B.S. Mathematics

- California State University – Stanislaus | December 2013

Power BI Data Analyst Associate

- Microsoft Certified ([Credly Badge](#)) | December 2022
